RE: Letter to Federal Energy Regulatory Commission Regarding the Rover Pipeline and pipeline approval process

TO: Cheryl A. LaFleur, FERC Acting Chair; Colette D. Honorable, FERC Commissioner
CC: John R. Kasich, Governor of OH; Sherrod C. Brown, Senator (OH); Rob J. Portman, Senator (OH)

Dear Commissioners,

We write to express our deep concern regarding the extensive environmental harm caused by Energy Transfer Partners in their construction of the Rover gas pipeline, and to demand immediate action to eliminate the ongoing risk posed by this and future gas pipeline construction. This letter has been signed by 114 organizations from across the country including along the pipeline route in Michigan, Ohio, Pennsylvania, and West Virginia.

The spilling of 2 million gallons of drilling waste into wetlands as a result of reckless horizontal drilling activities clearly demonstrates ETP's poor planning, neglect, and disregard for communities and the environment along the pipeline route. Already, the Ohio Environmental Protection Agency has fined the company over \$400,000 in response to numerous incidents during Rover Pipeline construction.

While we welcome the Federal Energy Regulatory Commission's (FERC's) recent action to halt new horizontal directional drilling on the project, it is clear that this limited action is not sufficient to ensure the safety of communities along the pipeline route.

Therefore, we write to demand that FERC halt all construction of the Rover Pipeline in order to ensure the safety of communities and ecosystems along the pipeline route. The permit case and environmental impact statement (EIS) should be reopened and supplemented so that horizontal directional drilling plans and procedures can be reviewed and improved. Further construction should be limited to only those actions needed to ensure the safety and stability of the vicinity until such a review is satisfactorily completed. A Supplemental EIS would allow for a more thorough analysis of the greenhouse gas emissions and climate change impacts of the project, which were lacking in the original EIS and Certificate Order.

Further, **FERC should initiate an immediate review of horizontal directional drilling plans and procedures on all open pipeline dockets. FERC should put the safety of communities and ecosystems first by halting the permitting for all new pipeline projects while conducting this comprehensive safety review.**

FERC has a responsibility to ensure projects it approves do not imperil the public. Immediate action is needed to live up to that standard with respect to the Rover pipeline and all other gas pipelines currently in the FERC docket.

Signed,
